

SLG Data Collection Template

This template may be used to organize data for SLGs. Use a separate scoring template for each assessment.

1. Educator adds name or identification number for each student in SLG.
2. Educator adds each student's baseline assessment data. This may be a score from beginning of the year assessment, NWEA, adopted reading and math unit assessments, or Smarter Balanced Assessments, etc.
3. Any measures that help to set baseline data for the student's performance.
4. Referring to SLG Template "Growth Target" section, enter a growth target for each student.
5. Educator enters the final performance data for each student.
6. Based on final score, educator indicates if each student met growth target by answering yes or no.
7. Indicate % of students that exceeded or met growth target and % that did not.

Educator's Name:	School:
SLG:	Assessment Name:

Student Name	Student ID#	Baseline Score	Growth Target	Mid-year Score(s)	Final Score	Exceeds/Meets Target Yes / No
