

The Facilities Department had a very busy summer as always. We were able to complete many tasks both in house and with outside contractors. We completed many moves at the LRES to allow all the 4th grade classrooms to be in the main core of the building. We also completed the renovations to one girls and one boys restroom. These restrooms are now ADA compliant and look great. At the Middle School the front entry project got underway but is still in progress. The only item left is the glass work. The contractors are currently waiting on the glass from the manufacturer. The same is true for the gymnasium entry doors. The high school water project got a very late start but was completed for the opening day of school. Everyone worked very hard to ensure that made the deadline.

We are currently completing tours of the building to ensure all rooms are setup in compliance with all life safety and health codes. This is always an ongoing process throughout the year and most staff are already aware and follow the regulations around the room setups.

ALICE training is well underway and at this point all current staff have been trained using an online module as well as live scenario training. We plan on having all the students trained very shortly. After the students are trained we will conduct drills at each building. These drills will be announced drills and used to teach ALICE in a controlled environment.
