

LRES Curriculum Wishlist for Surplus Funds

- We listed the curriculum items based on priority needs, so that if we cannot get them all, we would want to start with things at the top. Thank you for your consideration.

Laura Yacek

1. **i-Ready Math Pilot Materials-** \$21,987 (estimate with discounts - potential for another discount up to \$4,000)
LRES has used Math In Focus for more than 10 years. There was a math committee formed last year with teachers K-5 to evaluate the program and come up with math needs at our schools. The elementary school has explored other math curriculum (Tang Math) to support the gaps that MIF has for this school year. We would like to pilot i-Ready math school-wide next year, to see if the program meets the needs of the staff and students at LRES.
2. **Heggerty Decodable books** - \$4468
LRES uses the Heggerty program for phonemic awareness instruction. They recently published sets of student decodable books for teachers to use in small reading groups, that align with the Heggerty lessons. We would like to purchase 4 sets for each classroom teacher.
3. **Foundations Decodable books-** \$11,585
LRES uses the Foundations program for phonics instruction. They recently published classroom sets of student decodable books for teachers to use in small reading groups, that align with the Foundations lessons. We would like to purchase 1 set for each grade level. The set comes with multiple sets totaling 384 books.
4. **Guided Math Kits** - \$17,480
Teachers use Guided Math Kits from Hand2Mind as a supplemental curriculum for small group math instruction. These kits can be used for all tiered levels of support and in a 1:1 setting. Our K and 1st grade teachers currently have kits 1-4/5 and have seen great success when using them for helping students master math skills. We have budgeted for next year to add 2 more kits per grade level (k-2), but our goal is to have complete sets for all grade level teachers (a set is 1-9). This would allow us to complete sets for K-2 and create complete set for grade 3, who currently do not have any kits.
5. **Easy CBM** - Online subscription for our Special Education Teachers. *EasyCBM facilitates instruction and intervention at every RTI tier. They are progress monitoring assessments that help to provide data for IEP goals.*
6. **Foundations replacement materials-** \$18,900
Each student in grades K-3 has a set of FUNdations materials that are used

daily. This includes student white boards, magnetic letters for manipulation, gel boards (for grade 2) and magnetic boards. We have not replaced grade level sets since we purchased the program back in 2017. We budgeted for some replacements next year, a handful of sets per grade level, but this money would give us the opportunity to replace all sets for all grade levels.
